

Clean Technical Document

Abstract

This document serves as a high-quality reference for RAG pipeline evaluation. It contains well-structured text and clear diagrams.

The document covers key concepts in retrieval-augmented generation including embedding quality, chunk creation, and relevance scoring.

1. Introduction

Retrieval-Augmented Generation (RAG) pipelines require high-quality source documents. Poor document quality can lead to inaccurate and unreliable generated responses.

2. Methodology

Documents are evaluated across five dimensions: text extractability, OCR cleanliness, structural integrity, metadata completeness, and relevance.

3. Results

Experiments on 500 enterprise documents show that 42% score below 60 on standard profile thresholds. Th

4. Conclusion

RAGCheck provides a systematic, zero-API-key approach to document quality assessment. By identifying is
